**Question:** Why are you proposing alternate routes to ATXI's primary line?

**Answer:** Due to the health risks to our family, property devaluation and other issues addressed latter in this document. Gregory and Theresa Pearce's Alternate Routes will cross the same property

as proposed by ATXI's primary Route, or property along ACI's existing 138kv utility corridor.

**Question:** What is your proposal 1<sup>st</sup> choice of alternate routes and why did you choose it?

**Answer:** We prefer the alternate route that ATXI proposed upon filing because the right of way and the engineering is already being considered.

**Question**: What is your proposal 2<sup>nd</sup> choice of alternate routes and why did you choose it?

**Answer: Exhibit F** The wooden poles on the existing 138 kv line in Sangamon County will need to be replaced. That existing line could be dual circuited, or upgraded to a

higher voltage and save rate payer money by utilizing Ameren owned, existing easements. It would be a considerably shorter line, thereby saving construction costs.
